EXAMINER

HALEY, JOSEPH R

ART UNIT PAPER NUMBER

2627

DATE MAILED: 10/06/2006

Please find below and/or attached an Office communication concerning this application or proceeding.

**Office Action Summary**

Application No.

10/707,395

Applicant(s)

TSAI, MING-HSIEN

Examiner

Joseph Haley

Art Unit

2627

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

**Status**

- 1) ☒ Responsive to communication(s) filed on 10 December 2003.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

**Disposition of Claims**

- 4) ☒ Claim(s) 1-14 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 1-14 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

**Application Papers**

- 9) ☒ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 10 December 2003 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

**Priority under 35 U.S.C. § 119**

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some \* c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
  2. ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
  3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- \* See the attached detailed Office action for a list of the certified copies not received.

**DETAILED ACTION*****Specification***

The specification is objected to as failing to provide proper antecedent basis for the claimed subject matter. See 37 CFR 1.75(d)(1) and MPEP § 608.01(o). Correction of the following is required: Claim 2 is objected to because the limitation “wherein the amplifier amplifies the signal to a maximum allowable input level” is not described in the specification.

***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 3, 4 and 8-11 are rejected under 35 U.S.C. 102(b) as being anticipated by Fukumoto et al. (US 6493296).

In regard to claim 1, Fukumoto et al. teaches a tilt servo for adjusting a tilt angle between the optical disc and the object lens (column 7 lines 56-62); an optical electric integrated circuit (OEIC) for detecting light reflected from the optical disc (fig. 3); a DPD generator for generating a differential phase detection (DPD) signal according to the output of the OEIC (fig. 3 element 51); and a tilt search block receiving the DPD signal and being connected to the tilt servo, wherein the tilt search block controls the tilt servo to adjust the tilt angle

Art Unit: 2627

between the optical disc and the object lens according to the DPD signal (column 7 lines 46-55).

In regard to claims 3 and 10, Fukumoto et al. teaches wherein the tilt search block further comprises an analog to digital converter to convert the DPD signal to a digital DPD signal, and the tilt search block controls the tilt servo to adjust the tilt angle between the optical disc and the object lens according to the digital DPD signal (see fig. 3, Fukumoto et al. teaches digital circuitry, therefore it is inherent that there is an A/D converter).

In regard to claims 4 and 11, Fukumoto et al. teaches wherein when controlling the tilt servo to adjust the tilt angle between the optical disc and the object lens according to the DPD signal, the tilt search block finds an optimal tilt angle having the lowest amplitude DPD signal (fig. 5).

Method claims 8 and 9 are drawn to the method of using the corresponding apparatus claimed in claim 1. Therefore method claims 8 and 9 correspond to apparatus claim 1 and are rejected for the same reasons of anticipation as used above.

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Art Unit: 2627

Claim 2 is rejected under 35 U.S.C. 103(a) as being unpatentable over Fukumoto et al. in view of Scheffler (US 5021893).

In regard to claim 2, Fukumoto et al. teaches all the elements of claim 2 except wherein the amplifier amplifies the signal to a maximum allowable input level.

Scheffler teaches wherein the amplifier amplifies the signal to a maximum allowable input level (column 8 lines 26-31).

The two are analogous art because they both deal with the same field of invention of recording data.

At the time of invention it would have been obvious to one of ordinary skill in the art to provide the apparatus of Fukumoto et al. with the amplifier of Scheffler. The rationale is as follows: At the time of invention it would have been obvious to provide the apparatus of Fukumoto et al. with the amplifier of Scheffler because using the maximum allowable input signal decreases the chance of an error.

Claims 5-7 and 12-14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Fukumoto et al. in view of Gleim (US 4888754).

In regard to claims 5-7 and 12-14 Fukumoto et al. teaches all the elements of these claims except the use of coarse and fine adjustment of the tilt.

Gleim teaches the use of coarse and fine adjustment to control reproduction of data on an optical disc (column 1 lines 44-53).

The two are analogous art because they both deal with the same field of invention of reproducing from optical media.

Art Unit: 2627

At the time of invention it would have been obvious to one of ordinary skill in the art to provide the apparatus of Fukumoto et al. with the coarse and fine adjustment of Gleim. The rationale is as follows: At the time of invention it would have been obvious to provide the apparatus of Fukumoto et al. with the coarse and fine adjustment of Gleim because by using coarse and fine adjustment the tilt angle can be more accurately realized due to a specific servo that is designed for small movements.

### ***Conclusion***

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Joseph Haley whose telephone number is 571-272-0574. The examiner can normally be reached on M-F 8:30am-5pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, William Korzuch can be reached on 571-272-7589. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
